

Electrical steel for global business buyers

HXES coordinates material sourcing, partner processing and export services around your specification and delivery requirements.

Grain-oriented electrical steel

Review transformer applications, grades, coating and magnetic test conditions.

Non-oriented electrical steel

Confirm motor or generator applications, dimensions and magnetic requirements.

Transformer cores and laminations

Coordinate requirements with processing partners against drawings and acceptance criteria.

Slitting and cutting coordination

Confirm widths, tolerances, edge condition, coil weight and packaging.

Specification first

Application, grade, thickness, width, quantity, coating, magnetic properties and test conditions.

Quality documents

Request available batch certificates, coil identification, inspection records and packing lists. Agree acceptance criteria before ordering.

Processing scope

Submit drawings, slit widths, tolerances, edge condition and lamination requirements. Feasibility and scope require written confirmation.

Delivery arrangements

Confirm packaging, handling limits, destination, trade terms and required delivery window.

Commercial confirmation

Availability, grades, certifications, minimum quantities, sample terms, processing capability and lead times are confirmed in the specific quotation.
